

FRONTRUNNER 2X

Improving Utah's Commuter Rail System

The FrontRunner 2X project adds capacity to the FrontRunner system so trains can run more often, faster, and more reliably, supporting Utah's population and economic growth along the Wasatch Front.

26.1 Miles of Added Double Track	11 Double Track Sections	1 Realigned Section
10 New Trainsets	1 New Maintenance Facility	1 New Station

North of Provo Section

The North of Provo Section will extend the existing double track 0.7 mile from 900 West to the Provo Station. Additionally, the project will construct retaining walls, extend a culvert, relocate utilities and more. The project team will work with the community to mitigate impacts.
